

CISA CSET Exploration Report

Maltego:

- **Features:** Maltego is a tool for gathering open source intelligence (OSINT). It has the ability to analyze targets' profiles, connections and relationships on social networks. It is very effective in visualizing information thanks to its graphical interface.
- **Advantages:** User-friendly interface, access to various data sources and graphical analysis capabilities make it an effective tool for gathering threat intelligence.

Nessus:

- **Features:** Nessus is a vulnerability scanning tool used to detect weaknesses and vulnerabilities on computer networks. It has a comprehensive vulnerability scanning capability for different network devices and systems.
- **Advantages:** Provides security professionals with a rich feature set, automatic vulnerability scanning and comprehensive reporting.

MISP (Malware Information Sharing Platform & Threat Sharing):

- **Features:** MISP is a platform for sharing and analyzing threat intelligence. This platform has the capabilities to collect, standardize and share threat data from various sources.
- **Advantages:** MISP is a community-supported platform with a large data sharing network. Its customizable and broad feature set enables effective management of threat intelligence.
